

## Unlock the Future of Indoor Air Quality with Titus Displacement Ventilation

***When it comes to game-changing technology, we can always rely on Titus HVAC. One such game changer is Titus' displacement ventilation products. Here's why they stand out:***

**Superior Indoor Air Quality (IAQ):** Titus's displacement ventilation systems provide the highest level of IAQ by **effectively removing contaminants and stale air** from occupied spaces. This is achieved through a fully stratified system that introduces supply air at low velocities, allowing it to travel along the floor and rise naturally around heat sources like people and equipment.

**Energy Efficiency:** These systems use **warmer supply air and lower pressures**, resulting in significant energy savings. The design also allows for more free cooling days by utilizing outside air. This is similar to underfloor systems but with enhanced efficiency.

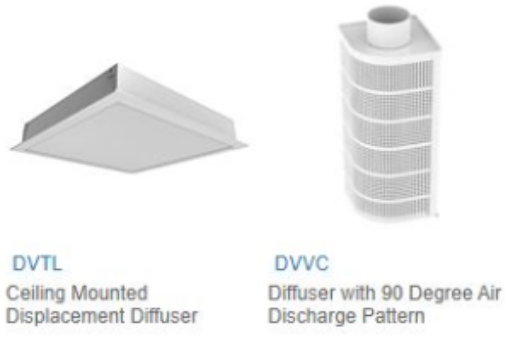

**Design Flexibility:** With a **variety of diffuser shapes and adjustable pattern controllers**, Titus's products can be **tailored to meet any design application**, ensuring optimal occupant comfort. The integral pattern controllers can be adjusted in various configurations to change the size and shape of the adjacent zone, **providing maximum versatility in the field.**

**LEED Contributions:** By **enhancing ventilation and reducing energy consumption**, Titus's displacement ventilation systems can **contribute towards achieving LEED credits**, making them an excellent choice for sustainable building projects.

**Enhanced Comfort:** The gentle, low-velocity air distribution ensures a comfortable environment by **reducing drafts** and **maintaining consistent temperatures** throughout the space. This is particularly beneficial in spaces where occupant comfort is paramount.

**Technical Specifications:** All Titus displacement diffusers include **adjustable air pattern controllers**, **air balancing taps**, **removable face plates**, and **all-metal construction** (galvanized steel and aluminum). They also feature a **standard #26 white powder coat finish**, with optional telescoping duct covers and mounting bases available.

***Integrating Titus displacement ventilation products into your HVAC design not only elevates air quality and comfort but also aligns with energy-saving and sustainability goals. Let's redefine comfort zones together!***
